

COMP3512 Lab/Chapter 8 Instructions

This lab will provide you with some experience using JavaScript. You will need to download the files from this lab's GitHub folder. You can do this by downloading a zip from GitHub, or by cloning the repo using Git.

- 1) Using a web browser, visit <https://github.com/mru-comp3512-archive/w2021-chapter08>.
 - a) If downloading, then click on Download button and download the zip. You can uncompress it someplace and continue with the lab.
 - b) If you have installed using Git locally on your computer, then create a folder for your lab, then in the Terminal (Mac) or Git Shell / Command Window (PC), use the following commands:

```
git init
```

```
git clone https://github.com/mru-comp3512-archive/w2021-chapter08.git
```

- 2) Once everything is ready, you will find a step-by-step lab (see **lab08-3rd.pdf**). I strongly recommend you work your way through each exercise in this lab!

In this lab, you will find several *Test Your Knowledge* sections. Have these labs completed by Friday January 29.

Marking remote labs is time consuming, and it takes time to mark everyone during office hours or before/after tutorials/lectures.. So, I'm willing to mark labs +/- week. Don't let this fool you into thinking you can finish labs a week late, as doing so will only get you quite behind in the course.

Please don't skip the other walkthrough exercises and simply complete the *Test Your Knowledge* sections. The other walkthrough exercises are there to teach you different aspects of JavaScript, and you won't learn them by skipping over them!!
